Unit 1
Lesson 1

Define Data Quality Management (DQM)

LESSON OVERVIEW
In this lesson, you will learn how to define Data Quality Management.

LESSON OBJECTIVES
After completing this lesson, you will be able to:

- Identify the components of Data Quality Management Services (DQM)

Describing Data Services

SAP Data Services enable you to create jobs that extract data from heterogeneous sources, transform that data to meet the business requirements of your organization, and load the data into a single location.

Note:
Data Services can be used for both real-time and batch jobs. This course covers batch jobs only.

Data Services provides batch and real-time data movement and management. Combined with intelligent caching, Data Services provides a single data integration platform for information management from any source for any purpose.
